Currently pursuing an MSc in Data Science, with hands-on experience in building production-grade services. Particularly interested in how data and automation are shaping carbon markets and the energy transition

Education

MSc Data Science, Northumbria University, Newcastle

Sept 2025 - June 2027

Relevant modules: Big Data & Cloud Computing, Advanced Databases, Machine Learning, Statistical Programming

Technical Experience

Python Developer - Hoboetech, Lahore, Pakistan

March 2025 - Sept 2025

- Designed and implemented scalable data processing pipelines in Python, supporting downstream analytics and production applications
- Implemented data validation, monitoring, and fault-handling mechanisms to improve system reliability and data integrity.
- Improved distributed workflow resilience through retry logic, and failure recovery strategies.
- Collaborated with cross-functional teams to diagnose performance issues and improve system maintainability.

Python Developer - CyberEvanglists (Software Consultancy) , Lahore, Pakistan

July 2023 - February 2025

- Designed and deployed 10+ production-grade REST APIs using FastAPI, supporting real-time data services with 1000+ daily requests
 - Built distributed, asynchronous processing systems using Celery and Redis to handle event-driven workloads and long-running tasks
 - Optimized SQL queries and indexing, reducing API latency by 12% and improving data retrieval efficiency for business operations
 - Collaborated with cross-functional teams to design and deliver backend features in an agile development environment
-

Projects

FAST Bot | Python3, Flask, React, Machine Learning | [GitHub](#)

- Built a full-stack application integrating machine learning models with backend APIs for real-time predictions.
- Developed REST API endpoints supporting real-time model inference and automated data processing.
- Explored how predictive models can support data-driven decision-making, similar to applications in finance and operations.
- Demonstrated how machine learning predictions can support decision-making through a user-facing interface
- Added input validation, error handling, and monitoring to improve service reliability.

Carbon Market Tracker | Python, FastAPI, SQLite, Streamlit, Plotly | [Github](#)

- Built an end-to-end data pipeline fetching live EU ETS carbon allowance (EUA) prices from the European Energy Exchange (EEX)
 - Designed a SQLite storage layer with upsert logic and daily scheduling via APScheduler
 - Computed rolling analytics (7-day MA, 30-day MA, 20-day annualised volatility) and automated $\pm 3\%$ price movement alerts
 - Served data via a FastAPI REST API and visualised it in an interactive Streamlit dashboard with Plotly candlestick charts
-

Technical Skills

Programming: Python, C++, SQL, JavaScript

Backend & APIs: FastAPI, Flask, REST APIs

Cloud: AWS (Basics), Azure (Basic)

Infrastructure & Systems: Docker, Linux, Redis, Celery, Bash

Data & Analytics: pandas, NumPy, Streamlit, Plotly
